Question 2. Create 3 IAM users of avengers and assign them in developer's groups with IAM policy

The screenshot shows the AWS IAM console interface. The left sidebar contains the navigation menu with sections like 'Identity and Access Management (IAM)', 'Access management', 'Access reports', and 'Credential report'. The main content area displays the 'Users' page, which includes a search bar and a table of IAM users. The table has columns for 'User name', 'Groups', 'Last activity', 'MFA', 'Password age', and 'Active key age'. The 'Manish' user is selected, and its details are highlighted in the table. The 'Manish' user is assigned to the 'None' group, has never been active, and has a password age of 21 minutes ago.

	User name	Groups	Last activity	MFA	Password age	Active key age
<input type="checkbox"/>	hulk	developer	Never	None	None	-
<input type="checkbox"/>	ironman	developer	1 hour ago	None	1 hour ago	-
<input checked="" type="checkbox"/>	Manish	None	Never	None	21 minutes ago	-
<input type="checkbox"/>	thor	developer	Never	None	None	-

Question 3. Launch your linux instance in IAM and update your machine.

Launch an instance x Connect to instance x EC2 Instance Connect x 5th Nov Live Class x Create an IAM user x New Tab x Document.docx x Assignment Part. x

ap-southeast-1.console.aws.amazon.com/ec2-instance-connect/ssh?connType=standard&instanceId=i-072627023458bd6a3&osUser=ec2-user®ion=ap-southeast-1&sshPort=22

Prepare 15 authentic MCQ questions related to IAM

1. By default when you create a new user in the IAM console, the user has no access at all.

(I) True

(II) False

2. Identify the wrong statement.

- (a) Identity and access management (IAM) is a framework for business processes that facilitates the management of electronic or digital identities
- (b) With IAM technologies, IT managers can control user access to critical information within their organizations
- (c) Identity and access management products offer role-based access control
- (d) In IAM roles are defined according to the ability of an individual user to perform a specific task, such as view, create or modify a file**

3. Which of these is Identity in IAM?

- (a) Users
- (b) Groups
- (c) Roles
- (d) All of these**

4. When you first create an Amazon Web Services (AWS) account, you begin with a single sign-in identity that has complete access to all AWS services and resources in the account. This identity is called:

- (a) Root user**
- (b) Main user
- (c) Super user
- (d) None of these

5. An IAM user:

- (a) is an entity that you create in AWS
- (b) is to give people the ability to sign in to the AWS Management Console for interactive tasks and to make programmatic requests to AWS services using the API or CLI
- (c) **A and B both**
- (d) None of these

6. Choose the below statements are true or false for AWS:

1. When you create an IAM user, you grant it permissions by making it a member of a group that has appropriate permission policies attached (recommended), or by directly attaching policies to the user
2. You can also clone the permissions of an existing IAM user, which automatically makes the new user a member of the same groups and attaches all the same policies.

- (a) **1. True, 2. True**
- (b) 1. True, 2. False
- (c) 1. False, 2. True
- (d) 1. False, 2. False

7. IAM group:

- (a) Is same as IAM users
- (b) **Can be used to specify permissions for a collection of users**
- (c) Is truly an identity
- (d) All of these

8. Which of these is IAM principal?

- (a) A user
- (b) A role
- (c) An application
- (d) **All of these**

9. IAM role:

- (a) Have credentials (password or access keys) associated with it
- (b) Does not have any credentials (password or access keys) associated with it**
- (c) May or may not have credentials (password or access keys) associated with it
- (d) None of these

10. Temporary credentials:

- (a) It expires automatically after a specified time
- (b) Have a same set of permissions that your standard IAM user have
- (c) We can have control over the duration that the credentials are valid
- (d) A and C both**

11. AWS evaluates _____ when an IAM principal makes a request.

- (a) Username and Password
- (b) MAC Address
- (c) Security Policies**
- (d) IP Address

12. How many maximum managed policies can be assigned to an IAM entity?

- (a) 2
- (b) 5
- (c) 10**
- (d) 20

13. In addition to using IAM roles and policies or custom authorizers, you can use an _____ user pool to control who can access your API in Amazon API Gateway.

- (a) Amazon S3
- (b) Amazon Cognito**

- (c) Amazon EBS
- (d) All of these

14. What Does an IAM Do?

- (a) Manage user identities
- (b) Provisioning and de-provisioning users
- (c) Authenticating users
- (d) Authorizing users
- (e) Reporting
- (f) Single Sign-On
- (g) All of above**

15. Which user has no permission by default

- (a) EC2 user
- (b) IAM user**
- (c) Root user
- (d) Service user
